## **DETAILED ACTION**

### ***Specification***

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the embodiments of claims 34 and 35 do not appear to be discussed in the specification.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 contains the trademark/trade name OCG 825. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe a photoresist and, accordingly, the identification/description is indefinite.

3. Claim 33 contains the trademark/trade name AQUADAG (see page 14, lines 3-7 of the specification). Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe a colloidal suspension of graphite in water and, accordingly, the identification/description is indefinite.

4. Claim 35 contains the trademark/trade name PARYLENE C. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe an insulating material and, accordingly, the identification/description is indefinite.

5. Claim 33 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 33 recites the limitation "each set of said metal layers" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim. Claim 1 provides antecedent basis for a [single] metal layer, but does not provide basis for sets of metal layers.

***Pertinent Prior Art***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 5,892,227 discloses a radiation detection system and a process for preparing the same, wherein the radiation detection system comprises a continuous film of a wide band gap semiconductor radiation-detecting polycrystalline material, such as  $\text{HgI}_2$ , formed from a multiplicity of crystalline grains sintered together to form a continuous film, wherein the semiconductor film is patterned by photolithography for the vapor phase deposition of top metal electrode stripes. See the abstract; Figures 4 and 5; and column 12, lines 34-42.

US 5,227,635 discloses a mercuric iodide x-ray detector comprising a guard ring structure, a collimating shield, a collection electrode and an x-ray transparent entrance electrode.

Art Unit: 1756

US 5,677,539 discloses a semiconductor radiation detector comprising a semiconductor crystal, a bias electrode, a signal electrode and a control electrode, wherein the electrodes are formed by various deposition techniques, and the electrodes can be separated by modifying the surface of the crystal, and/or by bulk material on the surface of the crystal. See the abstract and column 11, line 48 to column 12, line 3.

***Allowable Subject Matter***

7. Claims 1-3, 5-32 and 34 are allowed.
8. Claims 4, 33 and 35 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.
